Clean Power Development President, Mel Liston, speaks at the Annual Meeting of the New Hampshire Timberland Owners Association held at the Gunstock Ski Resort. Roger Amsden, an independent reporter, captured the story that appeared in a number of newspapers around the state and is shown here by permission.

Next Generation of Biomass Plants Will Have New Look, New Synergies

By ROGER AMSDEN - Union Leader Correspondent

GILFORD - A new generation of biomass cogeneration plants which are in the development stage across the state will look like farm buildings and will be sited so that they will be able to develop synergies with the existing energy infrastructure.

That's the scenario Mel Liston of Clean Power Development Corporation LLC of Concord shared with members of the New Hampshire Timberland Owners Association at the organization's annual meeting held over the weekend at Gunstock Ski Area.

"Not only will the forest industry and loggers be able to find a market for wood chips, which is a low end product, but we'll be working to keep the kind of look the tourist industry likes. The new plants won't look like an industrial park building at all. They'll look like big barns with silos nearby where the biomass will be stored. A person flying over one of these sites will look down and think they're above a very productive farm instead of an energy plant," says Liston.

Mel Liston, the President of Clean Power Development, spoke of his company and proposed projects during the New Hampshire Wildlife Federation (NHWF) Annual Meeting held in Concord. The NHWF Executive Director, Joe Norton, had the following comments that appeared on the organizations website and within its news letter;

"I want to extend a special thanks to Mel Liston, our former board director and president of Clean Power Development (CPD), for sponsoring our annual meeting. Mel and I have been discussing ideas and talking back and forth for a few months about partnering on various wildlife projects that can benefit our federation, our wildlife, and their habitat. I really hope and believe that we will be working together for many years to come and it feels good to have the support from all the folks at CPD. The biomass industry (wood chips to power) benefits our state economically through jobs, the environment through clean renewable energy, and our wildlife through healthier forests."
