### **Simply Green Set to Expand in Berlin**

**(Portsmouth, NH)**- Simply Green Biofuels will expand into Northern New Hampshire by opening a distribution center adjacent to the Clean Power Development, LLC facility to be built in Berlin. The synergistic relationship will allow both companies to play major roles in building a strong, local economy while reducing the carbon footprint of the region.

Clean Power Development, LLC will assist Simply Green to co-locate and will run many aspects of its plant operation on Simply Green's biofuel products. Start up burners within the facility, on-site equipment and back up building heat are all applications for Simply Green's BioHeat and BioDiesel. According to Andrew Kellar, Founder of Simply Green, "Our vision is to encourage loggers to replace traditional diesel used throughout the process- from the initial harvest to the transportation of wood to the facility- in order to have a truly environmentally friendly life cycle."

Mel Liston, President of Clean Power Development, LLC, fully embraces all aspects of environmental and social responsibility, but as he points out, it must also be "sustainable". "To be truly sustainable, energy producers must address not only the environmental needs but the economic needs of a community. By relying on local resources for fuel, we aim to make energy production a catalyst for local economic growth. Our Berlin energy production facility is sized to utilize only a sustainable amount of the regional forest derived biomass as renewable fuel. We shall do this in a highly efficient Combined Heat and Power design. The ability to offset the limited use of liquid fossil derived fuels with biofuels from recycled and indigenous supply significantly improves the carbon footprint of this operation while also increasing local employment and other regional benefits."

Simply Green Biofuels was founded in November 2006 with the intention of offering green alternatives to home heating, diesel and marine fuel throughout the Seacoast. Biofuels are a cleaner-burning mix of traditional petroleum based fuel and a renewable feedstock resource; Simply Green's is made from Waste Vegetable Oil (WVO). Blends are available from 5% up to 100% pure Biofuel. No system modifications are needed to run up to a 20% (B20) blend. Clean Power Development, LLC is a New Hampshire company that focuses on the development of renewable and sustainable wood-fueled biomass-energy facilities. We are dedicated to the principles of social and environmental responsibility, and we have set out to establish projects that, by design, help solve the energy and climate challenges that confront our era.
